# **Project Narrative Overview**

# **Definitions**

A Capital Improvement Plan (CIP), as defined by the National Council on Government Accounting, is a plan for capital expenditures to be incurred each year over a fixed period of years to meet capital needs arising from the long-term work program.

A capital improvement project is any major project requiring the expenditure of public funds (over and above operating expenditures) for the purchase, construction or replacement of the physical assets of the community. The project or asset should have a useful life of more than one year and have significant value.

The District has two levels of capital expenditures. Assets over \$5,000 with a useful life of more than one year are included for insurance and capital accounting purposes.

- Capital type purchases (\$200 to \$4,999) will comply with general purchasing procedures and are included in the operating budget. This internal threshold is for tracking purposes and includes items such as tools, non-recurring significant repairs that extends useful life, audio/visual equipment and some computer hardware/software.
- Capital purchases (\$5,000 to \$19,999) will comply with general purchasing procedures and are included in the Capital Improvement Plan document with a priority code, for funding from the District's Capital Fund.
- Capital projects (over \$20,000) must comply with general purchasing procedures, including due advertisement and sealed bids where appropriate. All capital expenditures over \$20,000 require approval by the Board of Commissioners unless purchased through a previously bid state or federal contract.

## <u>Overview</u>

The 2017 – 2021 CIP includes an inventory of all likely and anticipated capital requirements of the District within the next five years. Fiscal year 2017 is included with the Budget and Appropriations (B&A) Ordinance and Annual Budget documents. Carry-over projects are identified and listed in the Annual Budget document as expenditures in the proposed budget year but were appropriated in prior budget year(s). Deferred projects are re-appropriated in the 2017 B&A Ordinance. The Board discusses and authorizes carry-over projects and amounts after the year-end close and final invoices are processed.

Many of the cost assumptions in this Plan are preliminary estimates that will require refinement as discussion and implementation of a specific project progresses. As a result of these assumptions, funding needs to be flexible. Certain projects are included in the Plan with the expectation that an opportunity may be available for funding assistance. Should this type of opportunity fail to occur, a project may be dropped or deferred.

# **Overview (Continued)**

The CIP represents a continued commitment to the maintenance and improvement of our recreation facilities and the equipment necessary to maintain those facilities. Public comment is solicited before making major investment in facilities, including facility renovations, playgrounds and park development.

Continued revision of the CIP will help ensure that, to the extent possible, the District does not defer major capital requirements to the point where a future Board will have to act with a sense of urgency to construct, maintain or replace capital facilities.

Project Description Work Sheets are included to clarify the scope of the proposed capital expenditure. These worksheets are completed for capital projects where there are proposed expenditures from fiscal year 2017 through 2021. Worksheets are not completed for capital projects if proposed expenditures take place in the current fiscal year 2016 or the future years of 2021-2025 unless it is felt this information would be useful for full disclosure of the plan's intent. Examples may be a major expenditure in the current year that was unplanned or additional investments made a year or two after the completion of a project. Worksheet page references are included in the 5 Year Capital Improvement Plan Summary document.

Operating Committees have reviewed the CIP for items that affected their facilities and Divisions. Some modifications have been made as a result of those reviews. Proposed costs of items in this plan are at the gross or full cost. Trade-in, grants or other reductions are not included in the CIP but cash values are included as revenues in the capital fund under the Administration budget.

# Priority Codes

Staff has assigned the following priority codes to Capital Improvement Projects for the Budget Year 2017.

- A. Projects of high priority are those that directly affect the District's operations, typically are visible to the public, and are necessary to sustain the District's current level of service. A project may also be labeled as a high priority if substantial time and/or funding has been invested in planning or implementation, as in the case of a large project that began in one fiscal year and funded over two or three fiscal years.
- **B.** Projects of moderate priority are those that relate to established, but discretionary, norms for maintenance and service necessary to maintain the District's current level of service.
- **C.** Projects of lower priority do not fit the other criteria but are desirable, depending upon funding, and would expand or maintain the District's current level or mix of services.

# **Priority Codes (Continued)**

Staff has not prioritized the Lakefront Infrastructure project in this Draft Capital Plan as the Board continues discussion of scope and budget. Otherwise, the Budget Year 2017 consists of a large number of B priorities. Generally this is the case of a normal plan to meet the standards of maintenance and repairs necessary to maintain the District's current level of service.

- A Priorities: 2 items for 2017 total \$243,000 or 10%.
- B Priorities: 46 items for 2017 total \$1,972,900 or 78%.
- C Priorities: 5 items for 2017 total \$300,000 or 12%.

The total 2017 Capital Improvement Plan is \$5,009,900 with \$2.5 million in the Lakefront Infrastructure Project.

## Five Year Capital Improvement Plan Composition

Below is a chart of the amounts allocated to each park and/or facility for the full five year CIP, **including the Lakefront Infrastructure.**

Below is a graph of the Five Year CIP with the Lakefront Infrastructure shown separately in red.

Wilmette Park District 2017-2021 Capital Improvement Plan

# Five Year Capital Improvement Plan Composition (continued)

The 5 Year Capital Improvement Plan on pages 6 through 15, has dates next to each Playground Replacement. These dates represent the normal planned replacement year for the District's eleven playgrounds given a life expectancy of 20 years. All playgrounds replaced within the past 10 years are ADA compliant. Gillson and Langdon playgrounds are past their replacement dates because they were placed on hold with the Lakefront planning that began in 2008. Both playgrounds are in the five year window; Gillson in 2017 and Langdon in 2019.

The CRC Roof Replacement project was originally in the 2016 plan, but bids came in over budget and staff discussed alternatives before deferring the project. The roof will require some repairs until it is replaced in stages from 2019 through 2021 at an estimated cost of \$1.8 million.

The other project deferred from 2016 was the paging and security system at Centennial Ice and Tennis. Security cameras were installed but the sound and paging replacement was proposed over the anticipated budget. The 2017 plan calls for the replacement of sound and paging for a total of \$95,000 split between Tennis and Ice.

The District did complete several projects that were unbudgeted. An opportunity to replace the communications backbone with a fiber optic network allowed the District to save operations costs enough to pay for the project in a little over 1 ½ years. There was an opportunity to replace a pick-up truck at Parks as several vehicles were substantially under budget. Lastly, speakers at the Wallace Bowl failed at the beginning of the season and were replaced. Even with these unbudgeted items, completed projects are \$30,000 under budget and it is projected total capital will be \$530,000 under budget. The \$530,000 remains in the capital fund to be used against the 2017-2021 CIP.

The source of funds for the CIP comes from debt issuance, either referendum or the Debt Service Extension Base (DESB), planned transfer from operations and surplus from operations. The District continues to manage its operations to generate surpluses to assure adequate funds are available to meet the costs of the CIP.

Spending of funds and still meeting the District's Fund Policy is of primary importance. This allows an adequate source of resources in the event of late taxes, weather related program usage or unexpected facility problems; say a collapsing wall at the Tennis Club.

Staff believes it has offered a well-balanced plan in an effort to provide funds for the needed infrastructure replacement at the Lakefront. We have set placeholders based upon plans developed in preparation of the 2015 Referendum. These will be better defined as the Lakefront Committee continues with its design process and project considerations.

#### Description

This continues the replacement of PC technology with new equipment to increase productivity and network migration. We have reviewed older equipment and have identified those that have use in lower impact areas such as time management. Replacements will become more frequent to keep all users on standard platforms; however, we expect replacements will become less expensive as technology expands. FY 2017 includes EMV credit card readers, laptop replacements, new storage solution and tablets for the Commissioners.

| Project Title:           | Website Redesign           |
| Priority Code:           | В                          |

#### Description

The Website Redesign will be a complete design and architecture overhaul, including an updated look and easier navigation for the consumer. The update will include increased synergy between the website and social media. The update will also be more user friendly giving the District more control over content display. The bid award by the Board in October should have the new site available by  $2^{nd}$  quarter 2017.

| Project Allocation |                    |            |            |            |              |

| Priority Code:     | А                  |            |            |            |              |

## Description

This was the installation of fiber optic to facilities, upgrading to 100 Mbps from 1.5 to 3.0 Mbps to allow faster system communications. Using the vendor the Village was using for directional boring allowed a lower cost option. Increasing communication speed from 6.67 to 66.67 times the present configuration and monthly cost savings estimated at \$3,650 provided a payback on the project of 1.7 years.

| Project Title: | Shade Structure Replacement  |
| Priority Code: | А                            |

## Description

This replaces the skins on the various original 2001 shade structures around the pools. 2016 expenditure replaces skins on the early structures. The 2017 expenditure will replace the smaller structures around the wading pool. Although the skins are covered during the winter, it is time to replace the material.

| Priority Code:     | В                                               |            |            |            |            |  |

## Description

This replaces the CRC Server Room cooling units. The units are 7 years old but have had a great deal of repair including replacing the cooling coils. The original unit was undersized for our current server configuration. The units drew air from inside the building through the plenum ceiling versus outside, which added to the inefficiency because dust would clog the cooling coils.

| Location:      | Keay Nature Center |
| Project Title: | Pond Repairs       |
| Priority Code: | В                  |

#### Description

This represents the funds to complete a number of projects to get the pond and waterfall back into operating conditions. It includes the clean out of the organic sediment in the bottom of the pond including the pipes taking water to the deep well for the pump. The work includes installation of new low flow inlets to prevent the same sediment problem from happening again. Replacements of the water make up control for the pond. Repairs to the concrete deep well basin. Replacement of the electrical service including new control cabinet, proper grounding and running new power and control wires to the pump pit and waterfall. The pond was originally built in 1981 and is a favorite location for scout groups and elementary classes.

Department:Recreation FacilitiesLocation:West ParkProject Title:ADA Accessibility (5.8 Levy)Priority Code:A

Description

Funds are to develop and implement the Transition Plan to bring facilities up to required accessibility standards based upon the 2012 accessibility review performed by Recreation Accessibility Consultants LLC of Hoffman Estates. Funding in 2016 and 2017 plans include playground surfacing and tactile warning replacement signs at various locations. New recessed hand dryers will be replaced at various locations.

### Description

A sand silo for the golf course will be used to store the dry sand that is spread on the golf course putting greens. The sand is currently being stored inside the maintenance building where all of the equipment is located. The reason the sand is located in doors, is the same reason why the silo is needed. The sand purchased is a processed sand. The sand is dried and cleaned so there are no dirt particles and unwanted material that would come into contact with the greens. The new USGA greens were constructed out of a specific sand mix, spreading dried sand allows staff to keep the greens construction intact without any contamination.

The sand silo would hold fifty tons of sand, or approximately two truckloads. One truckload, or twenty-five tons, costs approximately \$1,500 dollars.

| Project Title: | Bunker Liner Installation    |
| Priority Code: | С                            |

#### Description

The 2017 bunker liner installation project is part one of a four part process to install permeable bunker liners in all of the sand bunkers on the golf course. The 2017 project will be completed by staff; the allocated funds are for the materials needed for the liners and new bunker sand for the front nine green side bunkers. The new liners are being installed to aid with the bunkers drainage, while creating a barrier between the soil and bunker sand. The aggregate properties of the liner also help keep the sand located in the bunker, in place. The construction process would begin by removing the old contaminated bunker sand. This sand is contaminated due to all the sever rains and continuous "washing" of the bunker sand. The sub-grade of the bunker would be prepared for the liners installation, following installation new clean sand will be packed into place at a depth of no less than eight inches.

| Project Title: | Well Refurbishment           |
| Priority Code: | В                            |

### Description

The golf course wells are the main source of irrigation water for the course. The wells were installed so water could be pulled from the ground in order to no longer pay for city water. The wells are currently seven hundred and eight hundred feet deep respectively. The wells are turned on when the golf course needs water. The irrigation system pulls the water from the reservoir, and the wells in turn refill the reservoir. The wells are fifteen years old and preventive maintenance is necessary in order to preserve their quality and prevent from unwanted additional expenses. This process would include motor maintenance and examination to the piping that goes underground.

### Description

The chemical storage building would be a new building to replace the cold storage building located in the golf maintenance parking lot. The new building would be a temperature-controlled environment where chemicals and fertilizers could be stored safely by OSHA recommendations. This building would also serve as the main mixing and filling area for all spray applications. Having a water source for filling the sprayers and the chemicals all in one location makes our operation more effective and efficient. The entire building will be designed for safety in case a fire or spill was to occur, making fire protection and spill containment a top priority. The floor of the building would be pitched so liquids could flow to a sump pit that will aid in the removal of the chemicals in case of a spill. Combining the two projects of the equipment wash station, and chemical storage building allows the projects to be completed together utilizing the same footprint at the golf maintenance parking lot area, while also allowing for all functions of both projects to be utilized by staff once completed.

| Project Title: | Chemical Wash Station        |
| Priority Code: | В                            |

#### Description

The Chemical wash station is a project that would be done in conjunction with the chemical storage building. The wash area would be outside, but all plumbing and utilities would come from the CSB. The purpose is to clean equipment and vehicles efficiently with high volume hoses. After equipment is cleaned grease, oil, and grass clippings need to be contained and removed from our current driveway area. The new EWS would have a recycling pit that would aid in the proper disposal of this debris.

Current equipment is washed with a garden hose, and the area where the equipment is washed needs to be cleaned daily.

| Project Title: | Practice/Nursery Green Facility      |
| Priority Code: | В                                    |

# Description

A nursery green gives the maintenance staff the ability to grow extra grass set aside from the golf course. Having readily available, locally grown grass gives staff more flexibility to repair and replace turf at a lower cost. Additionally, this area can be used to expand the teaching program and increase revenue.

| Priority Code: | В                                         |

### Description

The riding greens mowers for the golf course are the primary machines responsible for mowing the golf course putting greens six to seven days a week. The current riding greens mowers are nine and ten years old respectively. Modern day replacement recommendations are every five to six years. Mowing greens takes approximately eight man-hours a day to accomplish. Purchasing two mowers, operated by two employees ensures that greens are mowed in four hours or less in front of a busy golf schedule.

| Priority Code: | В                                         |

#### Description

The two walking mowers are in replacement of the two mowers that are being used currently. One of the mowers is used to mow the inside edges of all putting greens. This process is done so that the larger ride on greens mowers do not put extra wear and tear on an already heavily trafficked area on the greens. The collar mower is used to mow the thin lower height of cut grass that surrounds the greens. Our greens do not cater to a "wider" collar and a walking mower is needed to fit into tight locations. Walk mowing the collars out in front of the greens also helps keep large mowers away from the greens preventing from unwanted traffic.

# Description

The turf roller would be an additional purchase; the maintenance department purchased a used roller in 2015. This roller would be an additional roller so staff has two machines to aide in getting the greens rolled in front of a busy golf schedule and before large outings and events. A turf roller insures that the greens are smooth, the smoother the greens surface the better putting quality that is available for our customers. Rolling the greens takes 4.5 manhours to complete. With two machines, two employees could complete the task in just over two hours.

### Description

The bank mower for the golf course is used for mowing the golf course "rough" on steep banks and around hazardous mowing environments. The bank mower is designed to safely drive on steep banks of sixty degrees or less. The mower decks have the ability to move horizontally allowing employees to operate the machine from a safe location and still reach grass in an unsafe area. The bank mower is a key component for this facility to mow around the new grass faced bunker faces installed during the renovation. Utilizing the bank mower allows for less handwork keeping employees off these hazardous mowing areas.

#### Description

The utility vehicle is a heavy-duty vehicle designed to carry heavy payloads of materials that the everyday golf cart maintenance vehicles cannot. Utility vehicles can be loaded with materials up to 1 ton. We use these vehicles to haul sod, dirt, and sand six to seven days a week. The hydraulic lift gate allows employees to dump materials without any manual lifting. The auxiliary hydraulics allow the utility vehicle the ability to plug other equipment into the back, such as turbine blowers, hydraulic sweepers, and aerifying equipment.

### Description

The new rough mower would replace the current rough mower. The rough mower is responsible for mowing a majority of the "rough" or higher height of cut grass on the golf course. The golf course currently has 70 acres of rough that is mowed weekly. This task takes approximately 28 man-hours a week. Mowing at this frequency insures proper golf course aesthetics and helps golfers find their golf ball and maintain pace of play.

| Priority Code: | В                                         |

### Description

The approach and tee tri-plex mower would be a replacement machine, replacing one of the oldest mowers in our fleet (18 years old). In the past, as greens mowers were replaced they would be refurbished and used as tee or approach mowers. In 2017 new greens mowers were purchased, these particular mowers are not needed on the tees and approaches now. A much cheaper machine should be purchased for the tees and approaches, but still insuring we are following a proper replacement schedule.

Nothing changes for the maintenance department the same amount of machines are being used and completing the tasks within the same time restraints

### Description

The sand pro machine is the main machine for raking the bunkers on the golf course. The sand pro is used six to seven days a week in raking bunkers ahead of golfers. It takes four man-hours a day using this machine to rake bunkers. The plow on the front of the sand pro is used to push up sand after storms.

### Description

A debris vacuum blower is used to vacuum up golf course debris and remove it from the course. The Vacuum has the ability to pick up heavy landscape materials including grass clippings, leaves, soil, sand, and aerification debris. Having the ability to pick up the materials with a machine would eliminate hours of manual labor.

### Description

The skid loader is a versatile piece of equipment that is used daily by the golf maintenance operation. It is used for construction projects and the hauling and loading of materials, it is used to help take heavy delivers off trucks. The current skid loader is 19 years old, and was gifted to the maintenance operations after "West Park" purchased themselves a new machine. The 19-year-old machine came with its share of problems and the golf maintenance operation has spent money to continue to keep it running. The overall investments are adding up, justifying the purchase of a new machine.
